## BEST AVAILABLE IMAGES

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images may include (but are not limited to):

- BLACK BORDERS
- TEXT CUT OFF AT TOP, BOTTOM OR SIDES
- FADED TEXT
- ILLEGIBLE TEXT
- SKEWED/SLANTED IMAGES
- COLORED PHOTOS
- BLACK OR VERY BLACK AND WHITE DARK PHOTOS
- GRAY SCALE DOCUMENTS

**IMAGES ARE BEST AVAILABLE COPY.**

**As rescanning documents *will not* correct images,  
please do not report the images to the  
Image Problem Mailbox.**

## Discrete Probabilistic Evaluation

Figure 31

$$A = \{ \begin{array}{l} p_1(1, 1) = 1 \\ p_2(3, 3) = 1 \\ p_3(6, 5) = 1 \end{array} \}$$

$$B = \{ \begin{array}{l} p_4(1, 1.5) = m1 * m3 \\ p_4(1, 3) = m1 * (1 - m3) \\ p_4(2, 1.5) = (1 - m1) * m3, \\ p_4(2, 3) = (1 - m1) * (1 - m3), \end{array} \}$$

$$\begin{aligned} \{p_5(2, 3) &= m4 * m6 \\ p_5(3, 3) &= m5 * m6 \\ p_5(4, 3) &= (1 - m4 - m5) * m6 \\ p_5(2, 4) &= m4 * (1 - m6) \\ p_5(3, 4) &= m5 * (1 - m6) \\ p_5(4, 4) &= (1 - m4 - m5 * (1 - m6)) \} \end{aligned}$$

Fusion (PF) of multiple assignments to the same point:

$$\begin{aligned} PF(2, 3) &= p_4(2, 3) + p_5(2, 3) - p_4(2, 3) * p_5(2, 3) \\ &= (1 - m1) * (1 - m3) + m4 * m6 - [(1 - m1) * (1 - m3) * m4 * m6] \end{aligned}$$

$$\begin{aligned} PF(3, 3) &= p_2(3, 3) + p_5(3, 3) - p_2(3, 3) * p_5(3, 3) \\ &= 1 + m5 * m6 - 1 * m5 * m6 = 1 \end{aligned}$$

*Evolutionary Search Augmented with Domain Knowledge*

Multi-objective portfolio optimization problem is formulated as a problem with multiple linear, nonlinear and nonlinear nonconvex objectives. However, the domain knowledge allows us to use strictly linear and convex constraints.

Knowledge about geometry of feasible space (i.e. convexity), allowed us develop a feasible space boundary sampling algorithm (solutions archive generation). By knowing the boundary of the search space, we can exploit that knowledge to design efficient interior sampling methods.

Convex crossover is a powerful interior sampling method, which is guaranteed to produce feasible offspring solutions. Given parents  $P_1, P_2$ , it creates offspring  $O_1 = \lambda P_1 + (1-\lambda)P_2$ ,  $O_2 = (1-\lambda)P_1 + \lambda P_2$ . An offspring  $O_k$  and  $P_k$  can cross over to produce more diverse offspring.

The diagram illustrates the evolution of the search space through three stages. Stage 1 shows a dark gray shaded hexagonal region labeled 'Linear Convex Feasible Space'. Stage 2 shows the same hexagon with several small white circles on its perimeter labeled 'Boundary Points'. Stage 3 shows the hexagon with points labeled  $P_1$ ,  $P_2$ , and  $P_k$  along its perimeter.

Example of Outer Product using as operator the function  $T(x,y)$

| T-norm                      | Correlation Type                     |
|-----------------------------|--------------------------------------|
| $T_1(x,y) = \max(0, x+y-1)$ | Extreme case of negative correlation |
| $T_2 = x * y$               | No correlation                       |
| $T_3 = \min(x,y)$           | Extreme case of positive correlation |

Figure  
37

Example of Outer Product using as operator the function  $S(x,y)$

| T-conorm                | Correlation Type                     |
|-------------------------|--------------------------------------|
| $S_1 = \min(1, x + y)$  | Extreme case of negative correlation |
| $S_2 = x + y - (x * y)$ | No correlation                       |
| $S_3 = \max(x, y)$      | Extreme case of positive correlation |

Figure  
38
